To whom it may concern,

I am writing to express my interest in working as a Technical Writer intern at Okta. I am currently an undergraduate computer science and philosophy student at Clark University in Worcester, Massachusetts. I am a highly motivated, hard-working individual who is willing to go the extra mile when it comes to software explainability and design, especially if it means that I will be able to learn new, exciting things.

Throughout my three years at Clark University, I have completed coursework in algorithm and data structure design, DBMS, computer networks and security, IoTs, technology ethics, and web development. As both a computer science and philosophy student, my studies are intensely involved in writing about complex concepts in a comprehensive, easily digestible manner, whether that be about algorithmic design, or philosophical ideas.

I am currently a research assistant for Clark University, working with multiple departments. I do work ranging from literary analysis and computer software testing, to statistical lab research; presently, I review literature regarding network/software security and disability accommodation, and I have previously worked in the biology department analyzing plant and microbial growth. As a teacher, I am required to write comprehensive, yet detailed notes about the research I do.

I am a diligent, down-to-earth individual who takes my work incredibly seriously, and I would love to work in fields relating to explainable software and documentation, especially if it means meeting new people, embracing opportunities to grow, and making a difference in people's lives.

Thank you so much for your consideration, I look forward to hearing back from you.

Sincerely,

Adryana Hutchinson
